EDUCATION

The Hague University of Applied Sciences (2021-2024, GPA: 4.7/5)
BSc User Experience Design, Minor in Product Design

Imperial College London (2026)
1-month product design summer school focused on product thinking, visual craft, prototyping

EXPERIENCE

Cal.com • **Senior Product Design Engineer** OCT 2026 → NOW

- Design and engineer core Cal.com product surfaces end to end, including booking flows, scheduling primitives, and team and enterprise features. Design and maintain proprietary components rather than relying on third-party libraries. Improve the coss ui library by closing gaps, refining primitives, and contributing new components.
- Use AI tools (e.g. Claude Code, Cursor) as a force multiplier across design, prototyping, and implementation to speed up delivery. Deliver production-ready components with correct semantics, complete states, and keyboard support for direct use by product
- Keep the design system consistent across tokens, spacing, states, dark mode, and motion. Define success criteria for assigned work and evaluate results after release.

New Designers • **Design Engineer** SEP 2023 → JUL 2026

- Led the audit and redesign of a faculty of design at our university, conducting 6+ stakeholder interviews and developing comprehensive brand strategy along with modular brand identity system. Built vibe-coded brand tools for teachers: automated lecture cover generators, study guide systems, and helped with granular brand rollout.
- Directed and built client projects end-to-end for EdTech, from brand identity to live frontend: prototyping, CMS, deployment. Regularly helped research groups turn ideas into vibe-coded prototypes for rapid testing.
- Introduced AI-assisted workflows (Cursor, Claude Code) in the organization, organized workshops, upskilled 20+ designers and other staff members over 3 years.

Pomegranate • **Design Engineer** DEC 2025 → SEP 2026

- Designed and maintained a multi-brand design system as a boilerplate template for agentic deployment workflows for insurance companies.
- Adapted brand guidelines into design tokens and components, managing Figma variables across brands. Collaborated with the senior dev team to set up components and tokens from Figma to code using Cursor and Claude Code.

Daito Design • **Associate Designer** OCT 2025 → DEC 2025

- Built a modular AI presentation system for Schneider Electric (ADIPEC 2025): component architecture across 6 decks. Also concepted and designed AI-powered interfaces for Schneider based of the user data we had.
- Helped build and facilitate an AI upskilling session for Shell Netherlands engineers in the industrial energy sector.

EPAM Systems • **UI Designer Intern** SEP 2022 → JAN 2023

- Contributed to product design development across Roompot, Mizuno, and UNESCO projects, focusing on brand-aligned visual systems as well as wireframes to prototypes. Helped win a pitch through quick prototype; included on 2022 company achievements list.

COMMUNITY

SpaceXAI • **Ambassador** MAR 2026 → NOW

- Organized Meetups, Pop-us, Hackathons bringing over 2,200+ developers and designers participants and engaging community in latest GrokBot and Cursor developments.

Mobbin • **Ambassador** JUN 2026 → NOW

- Led no-code initiatives for 8+ class events reaching over 300+ students across The Hague University of Applied Sciences.
- Created templates and resources for the community, helping designers bridge the gap between visual design and live production.

LANGUAGES

English
Polish
Dutch

TOOLS

Figma, Claude Code, GitHub, Cursor, COSS UI, JavaScript, HTML/CSS, GSAP, R3F, Three.js, WebGL, Base UI

SKILLS

Product Design, Rapid Prototyping, Design Systems, Motion Design, Branding, User Research, AI-Integrated Design, Software Development, Light Infrastructure
